## ART SERIES

The Art series is characterized by being a single-lever, standing out for its square lines with a sober yet elegant design finished in three color finishes (chrome, white and matte black).

The body of the faucet is made of chromed brass with a Ø25 mm ceramic cartridge in the washbasin mixers (normal and tall) and bidet, and a Ø35 mm ceramic cartridge in the shower set. Includes 1.5 m reinforced hose and slider for adjustable shower handle. Independent distributor in chromed brass.

At Imex Products, we have been manufacturing and marketing faucets since 2001. Over the years we have developed series with a very competitive design and price in the market; We work to always be at the forefront of design, investing in R&D&I and among our values we have the greatest commitment to our clients.

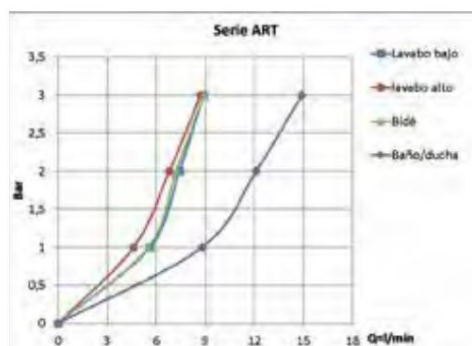

Information provided by the manufacturer under its responsibility.

**BERNA SERIES**

Berna kitchen series stands out for its timeless, simple but elegant design that gives it a unique personality and its wide functionality due to its removable spout with double jet diffuser, all with an easy-to-use architecture.

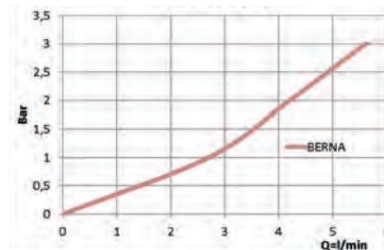

It also stands out for its sustainability, contributing to energy savings due to its cold opening cartridge. Available in a wide range of colors, two of them using PVD technique.

Faucet body made of brass with Ø35mm ceramic cartridge. Includes hoses to facilitate installation.

At Imex Products, we have been manufacturing and marketing faucets since 2001. Over the years we have developed series with a very competitive design and price in the market; We work to always be at the forefront of design, investing in R&D&I and among our values we have the greatest commitment to our clients.

**CÓRCEGA SERIES**

Our most distinguished proposal for free-standing single-lever bathtub faucets, stands out for its stylized shape to provide a select touch to the room available in 5 finishes, the traditional chrome, matte black and the rest using PVD technology (black gun metal, brushed gold and gold brushed pink), will make the bathroom not go unnoticed.

The body of the faucet is made of brass with a Ø35mm ceramic cartridge, includes a PVC hose and, most importantly, a floor-mounted register box.

At Imex Products, we have been manufacturing and marketing faucets since 2001. Over the years we have developed series with a very competitive design and price in the market; We work to always be at the forefront of design, investing in R&D&I and among our values we have the greatest commitment to our clients.

**ESCOCIA SERIES**

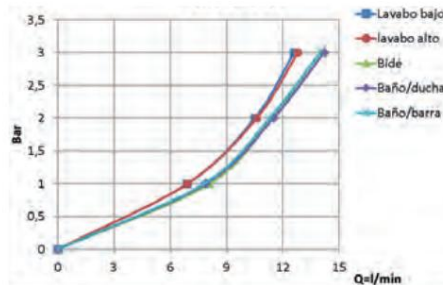

Beautiful ESCOCIA model, single lever, which perfectly combines robustness with curved lines that prevent water drops from stagnating while providing a pleasant view due to its "joystick" type handle.

The body of the faucet is made of chromed brass with a Ø35mm ceramic cartridge. In the case of the shower set, it includes a 1.5m reinforced hose, available only in a gloss chrome finish. The series consists of 4 elements, a sink faucet (tall and normal), a bidet and a shower set.

Imex Products has been manufacturing and selling faucets since 2001. Over the years we have developed series with a very competitive design and price in the market; We work to always be at the forefront of design, investing in R&D&I and among our values we have the greatest commitment to our clients.

The Imex Products siphons stand out for their elegant minimalist design for placement in an exposed sink, their Ø1 ¼" upper thread that fits perfectly with the shut-off valve of the sink and the Ø32mm side drain pipe that has a beautiful beautifier so that the bathroom is perfect.

Easy to install due to its simplicity, it stands out from the rest due to its removable base and easy cleaning.

**We also have an extension tube for height adjustment.**

Ideal complement for sinks or basins in a way that maintains the elegant and minimalist aesthetics.

The siphon is made of brass and zamak with different finishes according to the chrome color range, finished by ELECTROPHORESIS: black, gray and white (matte), glossy white, brushed nickel, champagne and the PVD finishes: black gun metal, brushed gold and brushed rose gold.

Information provided by the manufacturer under its responsibility.

TESTS CARRIED OUT	NORMATIVE	RESULT
Corrosion resistance (NSS)	UNE-EN 248:2003	Correct
Drain flow	UNE-EN 274-1:2002	0.63 l/s. Compliant
- Sink valve		0.53 l/s. Compliant
- Valve with sink siphon

## URAL SERIE

Elegant mod. URAL, single-lever, which perfectly combines the curved lines of its main components with well-crafted spout and handle towards straighter lines in a subtle and delicate transition.

The body of the faucet is made of brass with a Ø25mm ceramic cartridge. Available in 3 finishes: chrome, matte black through electrophoresis and brushed nickel that completes it with a sophisticated touch. The series consists of 5 elements, a sink faucet (tall and normal), bidet, bath/shower faucet and extendable shower bar.

Imex Products has been manufacturing and selling faucets since 2001. Over the years we have developed series with a very competitive design and price in the market; We work to always be at the forefront of design, investing in R&D&I and among our values we have the greatest commitment to our clients.

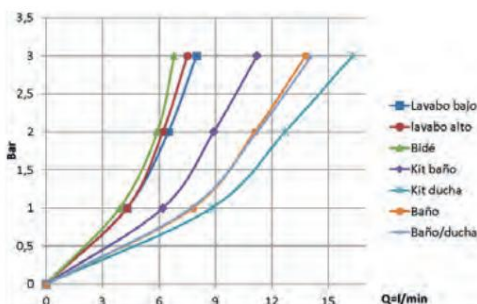

Information provided by the manufacturer under its responsibility.

The click-clack valve from Imex Products stands out for its easy use, since with a simple press the valve opens and closes, allowing the water to be evacuated from the sink or bidet quickly.

Ideal accessory since it is valid for sinks with or without overflow and its opening/closing system is guaranteed for 20,000 uses with a Ø1 ¼" lower thread.

**Quick and easy assembly.**

The valve body is made of brass with a stainless steel thread, cover depending on the model in different color range finishes: chrome, ELECTROPORESIS finishes: black, gray and white (matte), glossy white, brushed nickel, cham-pagne and the PVD finishes: black gun metal, brushed gold and brushed rose gold.

#### ROMA SERIES

The single-lever Roma series stands out for the sobriety of its curved lines. Includes Ø35mm ceramic cartridge. Made of s.304 steel and available in 2 finishes, traditional chrome and matte black (using electrophoresis). It includes a reinforced chrome and PVC flexible hose in the case of matte black, with support for a sliding and adjustable shower handle in a matching color.

The ACS certification is an official French authorization that certifies the conformity of a material intended for distributing drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. For this, they must require Health Compliance Certificates for all the products they purchase and install.

At **Imex Products**, we have been manufacturing and marketing faucets since 2001. Since then we have worked with design and quality to always be up to date, investing in R&D&I. and among our values we have the greatest commitment to our clients.

#### SERIES ART

The Art series is characterized by being a single-lever, standing out for its square lines with a sober yet elegant design finished in three color finishes (chrome, white and matte black).

The body of the faucet is made of chromed brass with a 25mm ceramic cartridge in the sink mixers (normal and tall) and bidet, and a 35mm ceramic cartridge in the shower set. Includes 1.5m reinforced hose and slider for adjustable shower handle.

Independent distributor in chromed brass.

Available in three finishes, chrome, white and matte black (lacquered by electrophoresis).

The ACS certification is an official authorization French, which certifies the conformity of a material intended to distribute drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. For this, they must require Health Compliance Certificates for all the products they purchase and install.

At **Imex Products**, we have been manufacturing and marketing faucets since 2001. Since then we have worked with design and quality to always be up to date, investing in R&D&I. and among our values we have the greatest commitment to our clients.

### SAONA SERIES

The Saona single-lever series is characterized by its contribution to energy savings, since in its type of sink and bidet taps, both incorporate a Ø35mm cold-opening ceramic cartridge. It implements an extendable bathtub bar in the set mode since the faucet is designed for 3 ways (bathtub filling, upper shower via the sprayer and shower handle) in this case also with a Ø35mm ceramic cartridge. Includes reinforced hose and support for sliding and adjustable shower handle.

Available only in s.304 steel with a chrome finish.

The ACS certification is an official French authorization that certifies the conformity of a material intended for distributing drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. #### MADEIRA -PORTUGALSERIES

The Madeira - Portugal series revolutionizes built-in showers, standing out from the rest for its push-button system to select the water outlet route.

Its design of square lines gives it personality. Being thermostatic, it incorporates a self-cleaning TURN CLEAN SYSTEM cartridge (patented).

Easy installation thanks to the fact that it incorporates a registration box. Available in two versions, one with a wall outlet pipe (Madeira) and another with an outlet pipe from the ceiling (Portugal) and finished in two finishes, the traditional chrome and matte black using electrophoresis. It also includes color-matched PVC hose.

The ACS certification is an official French authorization that certifies the conformity of a material intended for distributing drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. For this, they must require Health Compliance Certificates for all the products they purchase and install.

At **Imex Products**, we have been manufacturing and marketing faucets since 2001. Since then we have worked with design and quality to always be up to date, betting on R&D&I and our values. We have the greatest commitment to our clients.

#### HIDRA - FEROE SERIES

The Hidra – Faroe series revolutionizes built-in showers, standing out from the rest for its push-button system to select the water outlet route.

Its design of curved lines gives it balance. It is thermostatic and incorporates a self-cleaning TURN CLEAN SYSTEM cartridge (patented).

Easy installation thanks to the fact that it incorporates a registration box. Available in two versions, one with a wall outlet pipe (Hidra) and another with an outlet pipe from the ceiling (Faroe) and finished in two finishes, the traditional chrome and matte black using electrophoresis. It also includes color-matched PVC hose.

The ACS certification is an official French authorization that certifies the conformity of a material intended for distributing drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. ### GRIFERIA EMPOTRADA TERMOSTATICA SERIES

Imex Products has a complete range of built-in, single-handle and thermostatic faucets, in multiple shapes (round, square, oval) and color finishes (chrome, matte black and white, black gun metal, brushed gold, brushed rose gold), including with several exit routes, from the simplest 1 way to 4 ways to combine, for example, rain sprinklers, spray water or waterfall.

Made of stainless steel. s.304 to guarantee pleasant comfort in the bathroom.

The ACS certification is an official French authorization that certifies the conformity of a material intended for distributing drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. #### ROCIADORES SERIES

Imex Products has a complete range of sprinklers of multiple shapes (round, square, rectangular) and color finishes (chrome, matte black and white, rose gold black, gloss black gold), even with several outlet routes (rain, water sprayed or cascade) made of S.304 stainless steel to guarantee pleasant comfort in the bathroom.

To top it off, they are adjustable and easy to clean thanks to the silicone protuberances that release accumulated lime with a simple gesture.

The ACS certification is an official French authorization that certifies the conformity of a material intended for distributing drinking water.

Operators (manufacturers, operators of water treatment plants, transportation and storage facilities) must ensure that the materials, equipment or preparations delivered to them comply with the regulations. ## Annex I

### Normative UNE-EN 817:2009

Sanitary taps. Mechanical mixers (PN 10). General technical specifications.

This European standard specifies:

• the dimensional characteristics, tightness, resistance to pressure, hydraulic behavior, mechanical resistance, mechanical duration and acoustics that mechanical mixers need to comply;

• test methods to verify characteristics; The tests described in this standard They are type tests (laboratory tests) and not quality control tests carried out during manufacturing.

This European Standard applies to PN 10 mechanical mixers for use with sanitary appliances installed in rooms for personal hygiene (cloakrooms, toilets, etc.) and in kitchens, i.e. for use with bathrooms, sinks, bidets, showers and sinks.

Conditions of use and classifications are given in table 1.

Tabla 1 – Condiciones de uso/clasificaciones

Sistema de abastecimiento de agua	Intervalo de operación de los mezcladores mecánicos		Clases de caudal	Acústica	Marcado
	Límites	Recomendado	Véase la tabla 14	Véase el capítulo 14	Véase el capítulo 4
Presión	Presión dinámica ≥ 0,05 MPa (0,5 bar) Presión estática ≤ 1,0 MPa (10,0 bar)	Presión dinámica (0,1 a 0,5) MPa [(1,0 a 5,0) bar]	Z ≤ 0,15 l/s A ≤ 0,25 l/s S ≤ 0,33 l/s B ≤ 0,42 l/s C ≤ 0,50 l/s D ≤ 0,63 l/s	Grupo I -  Grupo II -  No clasificado	por ejemplo IA IIC / B  I /- a II /- a
Temperatura	≤ 90 °C	≤ 65 °C			

<sup>a</sup> Sin clase de caudal: los mezcladores mecánicos sin accesorios de salida intercambiables se ensayan con los accesorios de salida originales del fabricante y no se marcan con clase de caudal.

NOTA Los mezcladores mecánicos para usarse a presiones inferiores a las de la tabla 1 están cubiertos por la Norma EN 1286.

## Annex II

### ACS Certification

The ACS is an official French approval granted by a laboratory that has tested the conformity of the product in question with a view to its use for the distribution of drinking water.

As of December 24, 2006, all new materials must have a Certificate of Sanitary Compliance to comply with the decree of May 29, 1997 and its modifications, and the circulars of the Ministry of Health DGS/VS4 No. 99/ 217 of April 12, 1999 and DGS/VS4 No. 2000/232 of April 27, 2000, proving that they are of the quality required to carry water for human consumption.

ACS have an expiration date that ranges between 1 and 5 years.

Since that date, construction companies, operators of drinking water treatment plants and drinking water storage and transportation facilities have the obligation to verify with their suppliers that the materials, equipment and preparations they supply comply with the regulations, requiring the corresponding Health Certificates Compliance will be provided for all products purchased and installed.

Owners of buildings open to the public are responsible for the compliance and good maintenance of their water systems and for the quality of water distributed to consumers downstream of their water meter.

To be in compliance, operators and owners are required to request a Health Compliance Certificate for all equipment that comes into contact with water in distribution networks intended for human consumption.

ACS can only be issued by laboratories approved by the Ministry of Health.

They are issued upon completion of a series of tests designed to ensure that no compounds reach the water.

Such migration could cause the mutation of organoleptic properties and/or the development of toxic compounds, which would make the transported water unsuitable for human consumption.

All materials used in the manufacture of polyethylene pipes intended for the distribution of drinking water comply with the tests carried out and therefore have valid Health Compliance Certificates. The use of polyethylene pipes guarantees that no mutation or migration of compounds affects the organoleptic quality of the water that is distributed, neither in the short nor in the long term.

The French government's official health website, [sante.gouv.fr](http://sante.gouv.fr), provides a list of approved laboratories and ACS that are currently valid.

Organoleptic substances are substances that are absorbed through the mouth and can interact with sensory receptors.
